

## CAN WE MOVE IT?

**We need a few pieces of information from you to quote a Shed Move.**

- 1 - Total shed height? Measure from the ground to the highest point on the peak of the roof.
- 2 - Total shed width and length? Width must be measured shingle tip to shingle tip.
- 3 - Was the shed built as a portable building, using runners/skids as a foundation?\*
- 4 - Is the shed structurally sound to withstand the rigors of being moved?
- 5 - Address from where the shed is being moved?
- 6 - Address to where the shed is being moved?

\*\* 4X4 supports under your structure when measured from center should approximately 34" to the left and right. If there isn't a 4X4 centered under your structure the distance between the two should be approximately 72".

Photos are very helpful and are appreciated.

NOTE: All shed moves are paid in advance. If we come to your property and the structure cannot be moved our minimum charge is \$100.00 to cover the cost of man and driver.
